**SPECIFICATIONS:**

This unit will contain the following:

- **15 Amplifiers**
- **30 Coefficient potentiometers**
- **2 Auxiliary 10 turn potentiometers**
- **6 Floating initial conditions**
- **4 Dual bias diodes**
- **1 metering circuit with dividing network**
- **2 Operational relays**
- **1 Amplifier power supply**
- **1 Repetitive oscillator**
- **1 Reference power supply**

**Outstanding Features:**

This unit is unique in its ability to calibrate for high accuracy. By means of a null meter the following functions are accurately measured:

1. Coefficient setting
2. Overall gain from input to output of the amplifier
3. Initial Condition Set
4. Bias diode setting
5. Set up of a function generator
6. Throw voltages for operational relays

**NOTE**

A & \( \text{...} \)

**HEATH INEXPENSIVE ELECTRONIC ANALOG COMPUTER KIT**

**DESCRIPTION:**

This is a highly flexible and accurate analog computer, designed to fill requirements not presently met by any commercial computer. It is an instrument suitable for use as a design tool in industry and universities. An advanced “slide rule” which permits engineering or research personnel to electronically simulate equations or physical problems and save many hours of calculation or experimentation. Ideal for solving practical problems in industry, and equally valuable for research, or instructional demonstration, in colleges and universities.

Because it is a kit, and the labor and overhead costs found in present day computers are eliminated, the Heath Computer can be obtained for use in situations where a computer was ruled out in the past because of cost. Definitely not a “gadget,” but a high-quality, flexible, high-accuracy device designed to work for you. Incorporates such features as:

- 30 coefficient potentiometers, each capable of being set to an accuracy better than 1/10 of 1%.
- One standard reference supply for amplifier DC voltages.
- A nulling meter for accurate setting of computer voltages.
- A unique patch-board panel which enables the operator to “see” his computer block layout.

**CABINET: ES-400**

The computer cabinet houses power supplies, amplifiers, and computing components. It includes an accurate dividing network which introduces voltages to a null meter with an accuracy of better than 1/10 of 1%. By means of a switch, a potentiometer may be connected to the meter and read. This eliminates inaccuracy due to potentiometer nonlinearity, or loading.

The dividing network and meter may also be used to set up the initial conditions, to offset bias diodes, and to read any voltage which appears at the amplifier. The meter may be switched to any of the 15 amplifiers so they may be set to give full-scale deflection of plus or minus 2, 20 and 100 volts. The board also has the plus and minus 100-volt standard available, which is used in the dividing network.
**AMPLIFIER POWER SUPPLY**

**PURPOSE:** To supply power to the amplifiers and function generators.

**OUTSTANDING FEATURES:** The plus and minus voltages are referenced from one standard and are so interconnected as to null or cancel power supply drift to the amplifiers.

**POWER OUTPUT:** Plus 250 V. at 250 mills, minus 250 V. at 250 mills, minus 450 V. at 50 mills, 6.3 V.A.C. at 12 amps, and 6.3 V.A.C. at 2.5 amps.

**TUBE COMPLEMENT:** 1-5651, 3-12AX7, 3-6U8, 2-6080, 1-6BX7, 2-5R4GY, 1-5U4GB.

**MOUNTING:** This unit may be mounted in the computer cabinet or on a rack for special purpose computers.

**MODEL ES-2**

This power supply is a highly stable unit which features voltage regulation by a single 5651 tube. It is well rated for its use.

**INITIAL CONDITIONS**

**PURPOSE:** To supply initial condition voltage to integrators.

**OUTSTANDING FEATURES:** Low drift rate, ungrounded, floating supply, highly shielded.

**TUBE COMPLEMENT:** 2-OB2.

**MOUNTING:** Three of these dual initial conditions power supplies mount inside the computer cabinet. This makes a total of six floating power supplies available.

**MODEL ES-100**

This unit contains two separate supplies both of which can be varied from zero to 100 volts. Since they are floating supplies, they may be used for offsetting amplifiers and biasing diodes.

**AMPLIFIER**

**PURPOSE:** To provide an amplifier for integration, sign changing, addition, and multiplication by a constant.

**OUTSTANDING FEATURES:** This unit is a highly stable unit with low drift. It is linear from plus 100 to minus 100 volts, will deliver 10 mills, and has an open loop gain of 50,000. Its phase shift when connected as a unity inverter is less than one degree at 1200 cycles.

**TUBE COMPLEMENT:** 1-12AX7, 1-6BQ7A, 1-6BH6.

**POWER REQUIREMENTS:** Plus 250 V., minus 250 V., minus 450 V. Quiescent power is less than 5 watts.

**MOUNTING:** This unit may be mounted at the rear of the computer or on a standard rack mounting for special purpose computers.

**MODEL ES-201**

This unit has a shielded chassis and makes use of printed circuits for ease of construction and uniformity. It is mounted at the top rear of the computer where it is shielded thermally and electrically from the rest of the computer.
**RELAY POWER SUPPLY**

**MODEL ES-151**

**PURPOSE:** To supply power to operate the functional relays.

**OUTSTANDING FEATURES:** Has built in voltage surge network to insure simultaneous operation of the relays.

**POWER OUTPUT:** Designed to supply 50 volts across four 10,000 ohm relays.

**MOUNTING:** This unit may be mounted in the computer cabinet or in a special purpose computer.

This unit supplies a high surge voltage for rapid simultaneous operation of the relays, then the voltage drops to that necessary to hold the relays.

---

**REFERENCE POWER SUPPLY**

**MODEL ES-50**

**PURPOSE:** To supply highly stable and accurate reference voltages.

**OUTPUT:** Plus 100 volts and minus 100 volts.

**TUBE COMPLEMENT:** 2-6X4, 2-6U8, 1-5651.

**MOUNTING:** This unit may be mounted in the computer cabinet or in a special purpose computer.

In this supply the positive and negative voltages are slaved together and referenced from a single 5651. When operated with the constant voltage transformer, the output ripple, jitter, and noise is negligible.

---

**REPETITIVE OSCILLATOR**

**MODEL ES-505**

**PURPOSE:** To provide repetitive operation of the functional relays.

**OUTSTANDING FEATURES:** Has an adjustable repetition rate of 0.6 to 6.0 times per second.

**TUBE COMPLEMENT:** 1-6J6.

**MOUNTING:** This unit may be mounted in the front of the computer cabinet or in a special purpose computer.

The repetitive oscillator allows problem solutions to be displayed on an oscilloscope.
price list

SMALL COMPUTER—GROUP A $495

GROUP CONTAINS:
- One ES 2 Amplifier power supply kit
- One ES 100 Initial condition power supply kit
- One ES 151 Relay power supply kit
- Five ES 201 Operational amplifier kits
- One ES 400 Cabinet kit
- One ES 405 Patch cord kit

MEDIUM COMPUTER—GROUP B $775

GROUP CONTAINS:
- One ES 2 Amplifier power supply kit
- One ES 50 Reference power supply kit
- Two ES 100 Initial condition power supply kits
- One ES 151 Relay power supply kit
- Ten ES 201 Operational amplifier kits
- One ES 400 Cabinet kit
- One ES 401 Voltage regulator transformer kit
- Two ES 405 Patch cord kits
- One ES 447 Coefficient potentiometer kit
- One ES 505 Repetitive oscillator kit

FULL COMPUTER—GROUP C $945

GROUP CONTAINS:
- One ES 2 Amplifier power supply kit
- One ES 50 Reference power supply kit
- Three ES 100 Initial condition power supply kits
- One ES 151 Relay power supply kit
- Fifteen ES 201 Operational amplifier kits
- One ES 400 Cabinet kit
- One ES 401 Voltage regulator transformer kit
- Three ES 405 Patch cord kits
- Two ES 447 Coefficient potentiometer kits
- One ES 450 Auxiliary coefficient potentiometer kit
- One ES 505 Repetitive oscillator kit

FUNCTION GENERATOR
Model ES-600

PURPOSE:
To provide a function of "X" for any input of "X".

Power Requirements:
+250 volts at 16 ma.
-250 volts at 16 ma.
117 volts AC at 100 ma.

Input: .................. A voltage which varies with respect to time.
Output: .................. Approximation of functions by straight line segments.

OUTSTANDING FEATURES:
Variable breakpoint voltages.
High static accuracy (.5%).

TUBE COMPLEMENT:
5-6AL5 2-0B2

MOUNTING:
This unit is in a separate portable cabinet and is connected to the computer by means of varicon connectors.
This unit approximates curves or functions by straight line segments. The unit has a total of ten segments, five in the plus X direction and five in the minus X direction. The break voltage and slope of the segments are set by controls on the front panel.
The maximum slope per breakpoint is approximately one to one. The output voltage F(x) has a range of ±100v.
